

Doctor Module Documentation

System User Guide — Doctor

v 1.0.0

1 Doctor Module

The Doctor can see the current queue and booked appointments in the system. The module allows managing visitors, redirecting to registration, and adding comments.

1.1 Sidebar — Current Queue and Booked Appointments

The doctor has two sections in the sidebar: the current queue and booked appointments. Booked appointments are time-based — scheduled visits at a specific time. The three-dot  button allows calling a specific visitor or assigning/removing priority.

Element	Description
Current Queue	Visitors arriving from the kiosk or redirected from registration
Booked Appointments	Time-scheduled visits at a specific hour
 Menu	Call, assign or remove priority

1.2 Active Visitor Card

After calling a visitor, the active visitor card opens. The doctor has the following options:

Action	Description
Did Not Arrive	Mark the visitor as "did not arrive"

Action	Description
Complete	Finish the service — the button must be pressed when the visit is over
Redirect to Registration	Redirect the visitor back to the registration desk
⋮ Menu	Additional options
Booked Services	List of services added for the visitor with status
Comments	View/add comments about the visitor

1.3 Redirect to Registration

Clicking "Redirect to Registration" opens a popup. The doctor can select the target registration desk, assign priority, and write a comment explaining why the visitor is being redirected.

Element	Description
Desk List	Available registration desks with current and booked ticket counts
Priority	The visitor can be assigned priority upon redirection
Comment	Add a comment about the reason for redirection
Confirm	Confirms redirect to the selected registration desk
Cancel	Closes the popup without changes

1.4 Calling from Booked Appointments

The doctor can call a visitor from the booked appointments list when no visitor is present in the current queue. This allows the doctor to serve time-scheduled visitors when the queue is empty.
