
Helper Module Documentation

System User Guide — Helper

v 1.0.0

1 Helper Module

The Helper sees all active registries and the tickets belonging to each one. The "Latest Tickets" container shows the top 3 tickets from the head of each registry's queue. The helper can manage tickets — assign priority, change floor, or cancel.

1.1 Current Queues List

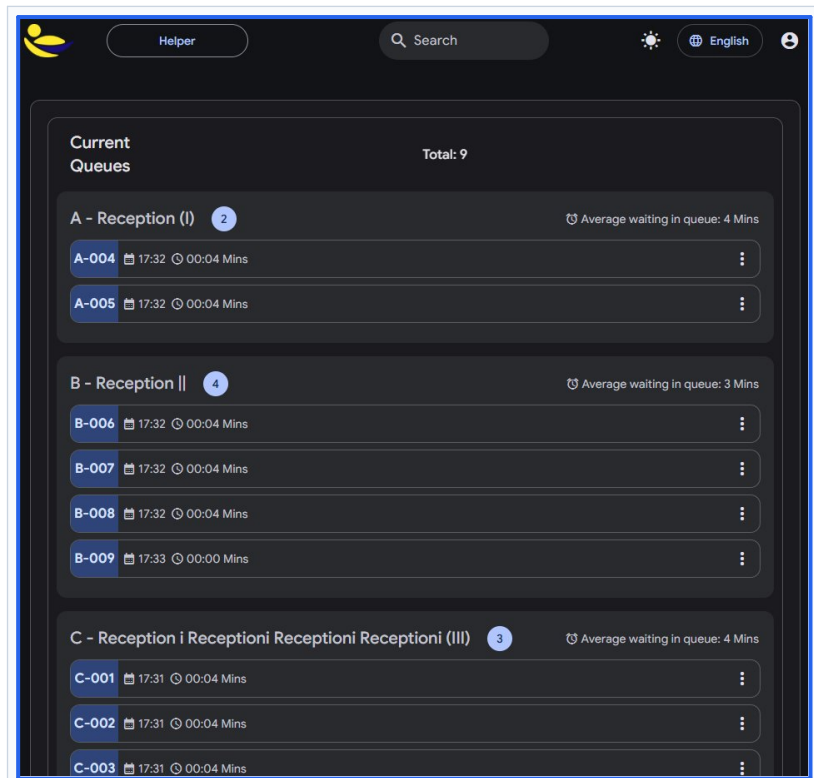

Fig. 1 — Current queues grouped by registry

The page displays all active registries. For each registry the following is shown:

Element	Description
Registry name	e.g. A - Reception (I), B - Reception II
Ticket count	Circular badge — number of current tickets
Average wait	Average waiting time in queue
Ticket list	Ticket number, date, and waiting time
: Menu	Three-dot context menu

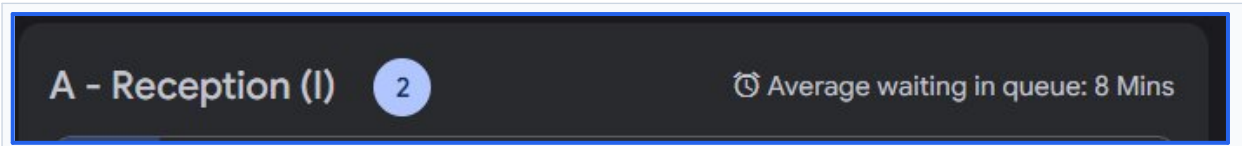

Fig. 2 — Registry header with ticket count and average waiting time

1.2 Ticket Management — Context Menu

Clicking the three-dot  button on any ticket opens a context menu with three options.

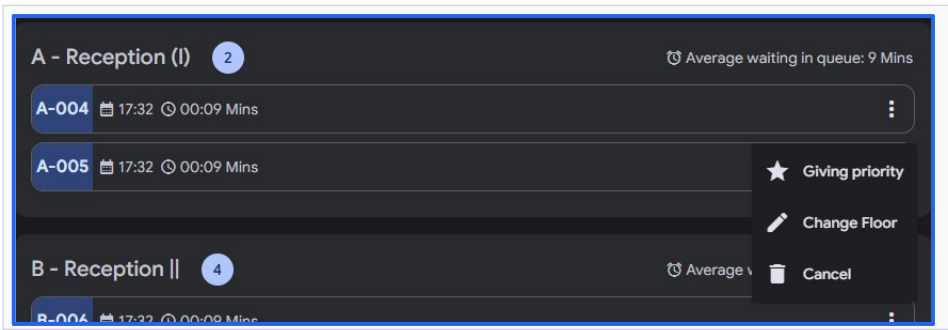

Fig. 3 — Context menu options

Action	Result
Giving priority	The ticket moves to the top of that registry's queue. If it already has priority, this option removes it — the ticket then moves to the bottom of the queue.
Change Floor	The helper selects another registry to redirect the ticket to.
Cancel	The ticket is permanently cancelled. No further actions can be taken on a cancelled ticket.

1.3 Change Floor (Redirect)

Selecting "Change Floor" opens a modal where the helper chooses the target registry. Each option shows the current and booked ticket counts.

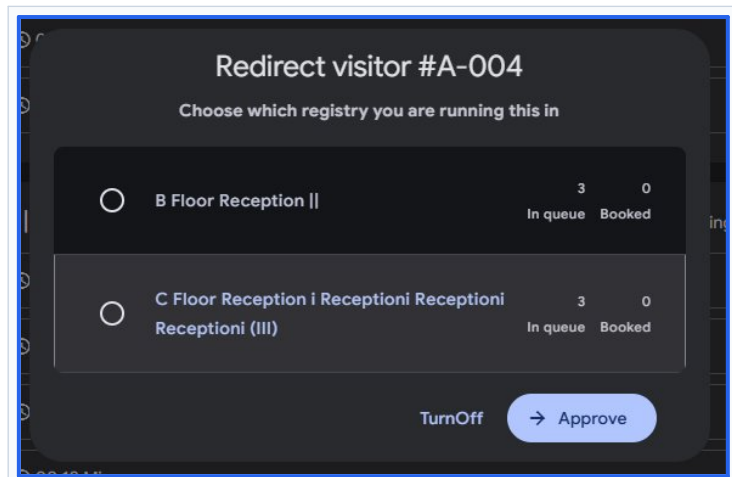

Fig. 4 — Redirect visitor modal

Element	Description
Ticket number	The ticket to be redirected (e.g. #A-004)
Registry list	Available registries with current / booked ticket counts
"Approve"	Confirms redirection to the selected registry
"TurnOff"	Closes the modal without making changes

1.4 Ticket Search

The helper can search for a ticket using the search bar at the top. Entering a ticket number (e.g. C-001) displays the matching ticket, on which all of the above actions can be performed.
